

82 Below - Visualizing Lead Contamination Risk in Chicago

Team: Sebastian Buzenas, Obaid Bin-Mahfoudh, Gavin Coffey, Pranav Kuchibhotla, Thailer Simmons

Instructor: Robert Ellis

Subject Expert: Elin Betanzo, CEO of Safe Water Engineering LLC

Problem Statement

Chicago's outdated lead service lines pose a significant *public health risk*, especially to *children*.

Exposure to lead is linked to *cognitive and developmental issues*.

Our Goal: Create an accessible, interactive visualization of lead contamination risk using geospatial data as well as empower the public and policymakers to take action by providing a clear risk assessment tool.

Existing Work and Data

Lead Exposure Risk factor:

<https://storymaps.arcgis.com/stories/87b9c4623fd04ad49793bfd414d3ae65>

<https://www.vox.com/a/lead-exposure-risk-map>

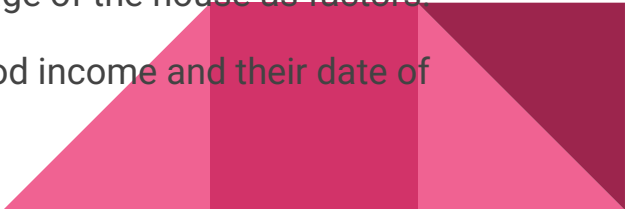

The two links above display a lead exposure map of both Chicago and of the whole country.

<https://sli.chicagowaterquality.org/>

The link above is the cities website to look up service lines

The first uses Single Family or Two Flat Residences, Population without Health Insurance, People of Color (Black and/or Latinx), Presence of Children, neighborhood income and the age of the house as factors.

The second exposure risk/lead risk score is purely based off of neighborhood income and their date of development.

City's website

When you can't find an address you have to manually go through a map and find the service lines close to your address.

Searching for a Service Line

1. If known, search using your water account number.
2. If not, search using your address. While entering your address a drop down will follow with suggested addresses, please select the correct address from the drop down.
3. Please do not add any unit number(s) to the address. The service lines are associated with the entire address.
4. Use the "Return to Homepage" button at the bottom to return to the previous screen.

Water Account Number:

Format: 6 or 7 numbers - 6 numbers

<input type="text" value="6 or 7 numbers"/>	-	<input type="text" value="6 numbers"/>
---	---	--

OR

Building Address:

Type in your address using N, S, W, or E for street direction; St or Ave, etc. for street or avenue; use no punctuation. e.g. 1000 E OHIO ST

Select from the suggested addresses that appear and hit the "Find" button. You will be directed to a map if no matching address is found.

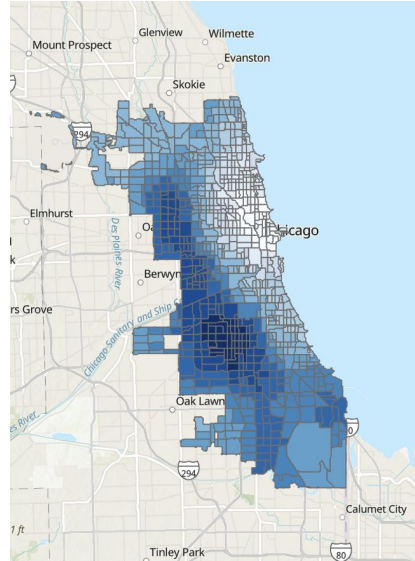

<input type="text" value="2961 W WARREN BLVD"/>
<input type="text" value="I don't see my address"/>

Existing Lead Exposure Maps

Lead exposure risk ranked from 1-10

Vox's exposure map of America

Lead Risk Exposure Index

6 represents most vulnerable to lead exposure

Sebastián Villa-Rodriguez's exposure map
created from ArcGIS

Team Organization

- Team Structure: Collaborative, cross-functional approach
- Roles:
 - *Sebastian Buzenas*: Spokesperson
 - *Obaid Bin-Mahfoudh*: Leader
 - *Gavin Coffey*: Editor
 - *Pranav Kuchibhotla*: Data manager
 - *Thailer Simmons*: Recorder
- Tools Used: [Github](#), [OneDrive](#), and Discord for collaboration

Progress Toward Goals

Data acquisition: Geocoded Chicago residential addresses, Geocoded Chicago service line addresses, acquired coordinates for schools apart of the Chicago Public School district, acquired demographic data

Initial Visualizations: Initial visualization using ArcGIS

Website Development: 82below.vercel.app

Database organization: MySQL workbench

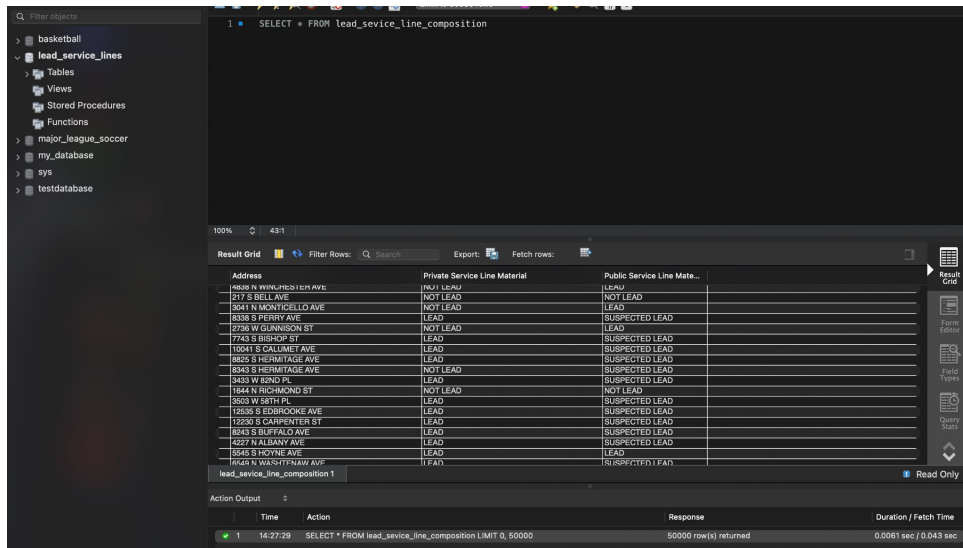

Tools used: City of Chicago GIS Geocoder, Census geocoder, ArcGIS, SQL, Python

MySQL Database

MySQL allows for better organization and manipulation of the datasets we are obtaining from multiple sources.

Combination of two tables can also be made easier with a MySQL database.

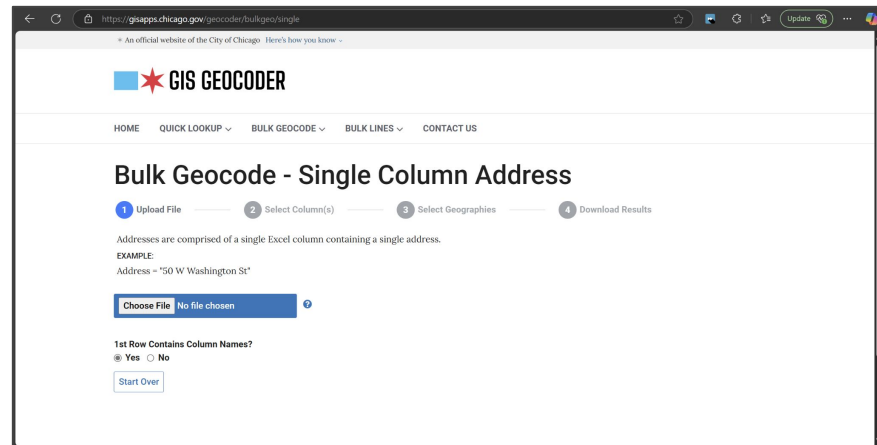

The screenshot displays a MySQL database management interface. On the left, a sidebar shows a tree view of database objects, including 'basketball', 'lead_service_lines', 'Tables', 'Views', 'Stored Procedures', 'Functions', 'major_league_soccer', 'my_database', 'sys', and 'testdatabase'. The main window shows a SQL query: `1 • SELECT * FROM lead_service_line_composition`. Below the query, a 'Result Grid' displays the query results. The grid has four columns: 'Address', 'Private Service Line Material', 'Public Service Line Mate...', and an unlabeled column. The results show a list of addresses and their corresponding service line materials, with some entries marked as 'LEAD', 'NOT LEAD', or 'SUSPECTED LEAD'. At the bottom, an 'Action Output' section shows the execution details: '1 14:27:29 SELECT * FROM lead_service_line_composition LIMIT 0, 50000' returned '50000 row(s) returned' in '0.0081 sec / 0.043 sec'.

Address	Private Service Line Material	Public Service Line Mate...	
14808 N WINSTED LICH AVE	NO LEAD	LEAD

Geocoding

- Strategies:
 - Cook County Tax Assessor Address Joins
 - One-to-one Address Mapping
 - Chicago Geocoding Website
- Limitations:
 - Data quantity constraints of methods
 - Time required for each method
 - Accuracy of geocoders based on data quality
 - Inconsistencies between methods

Visualisation

- Lead Risk Factors to consider
 - Youth Population
 - Median Income
 - Health Insurance Coverage
- Public and Private SL Composition
 - Geocoding Challenges
 - Hotspots
- Lead and Copper Rule (Guardian Data):
 - Lead exposure not to exceed 15ppb in drinking water
 - Recommendation for schools/childcare facilities not to exceed 5ppb (not enforced)

ArcGIS

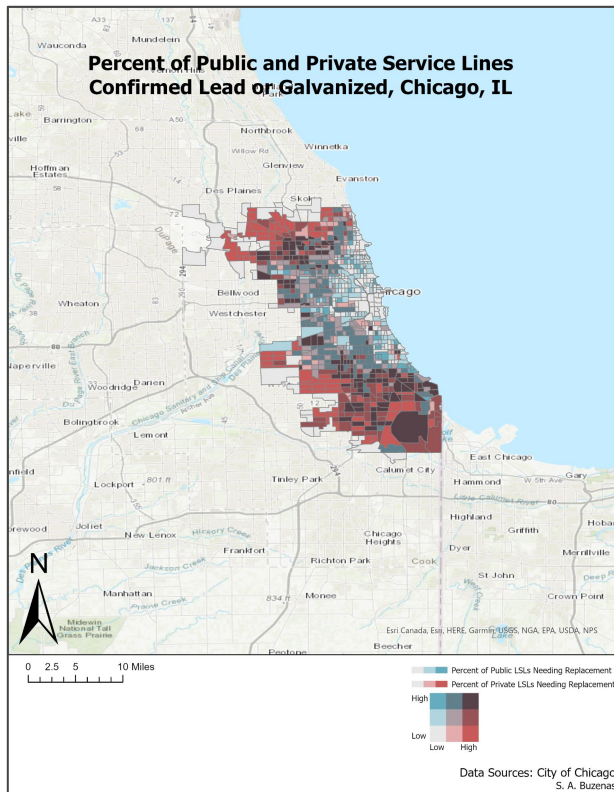

Visualisation

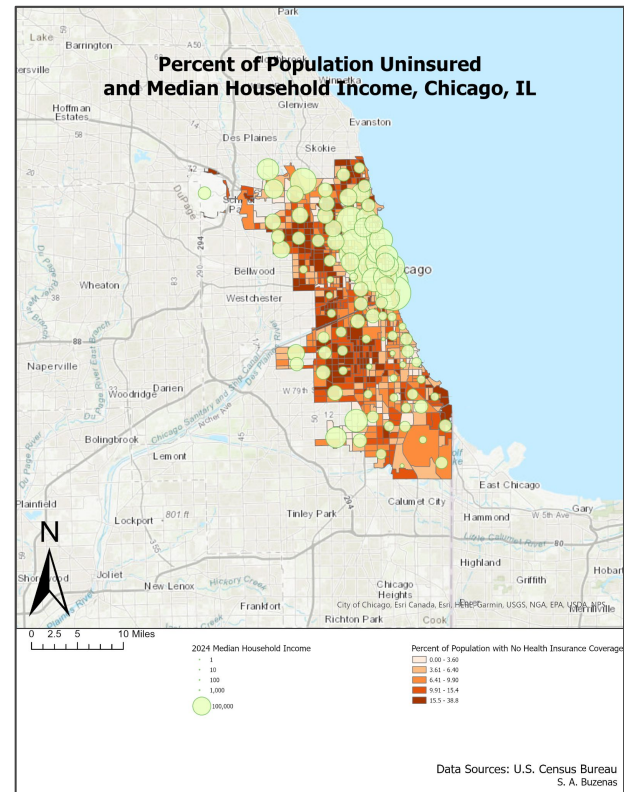

**Pediatric Population and Houses Exceeding Lead Limits
Chicago, IL**

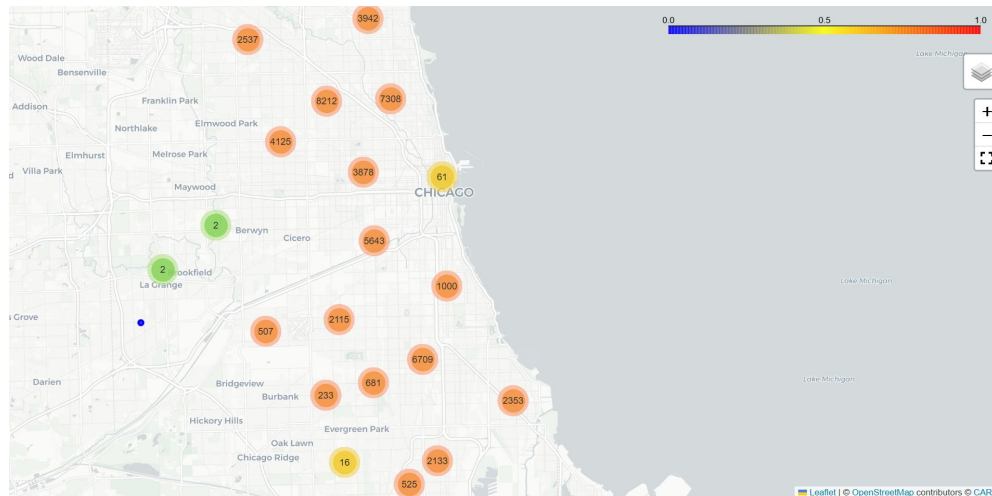

**Percent of Public and Private Service Lines
Confirmed Lead or Galvanized, Chicago, IL**

**Percent of Population Uninsured
and Median Household Income, Chicago, IL**

Visualisation

We used data science techniques like Kernel Density Estimation (KDE) and geospatial mapping to identify high-risk areas.

Lead Density Visualisation

To measure the concentration of lead service lines, we used KDE. We computed density scores using Gaussian KDE, which smooths data points to reveal broader trends rather than just individual locations.

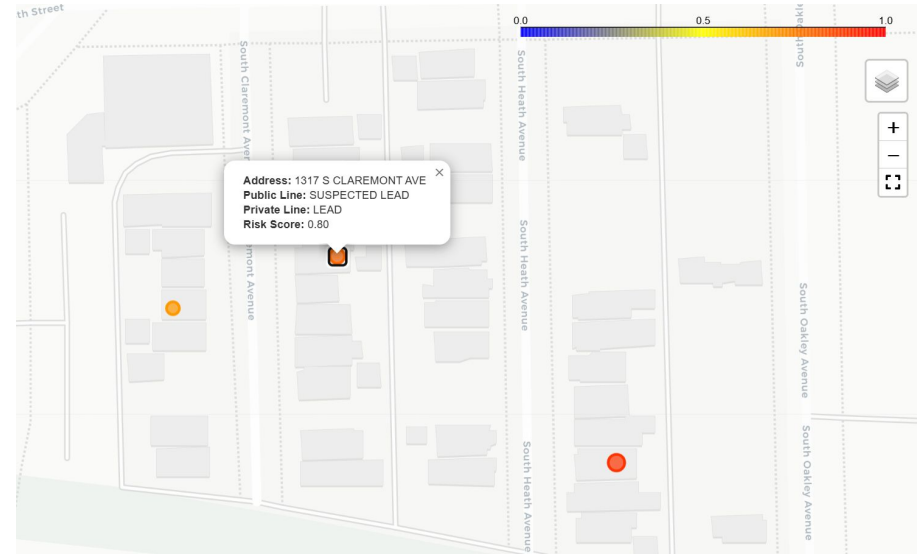

Each data points intensity is determined by its KDE density score, helping visualize problem areas more effectively.

Lead Risk Visualisation

The color scale transitions from blue (low risk) to red (high risk) making it easy to identify critical areas.

The marker cluster groups nearby properties, improves readability and clicking on a property reveals details like its address, service line materials, and the risk score.

Data Exploration

Service Line: We have a total of 487,347 data points

We have around 3,979 duplicate addresses for a total of 483,368 unique addresses

Assessor: We have a total of 884,116 data points

What causes duplicates?

Data Exploration - Service Line Duplicates

Some are straight duplicates

7110 S PARNELL AVE	NOT LEAD	LEAD
7110 S PARNELL AVE	NOT LEAD	LEAD

Some are duplicates with one saying not lead and the other saying Galvanized

Address	<input checked="" type="checkbox"/> Private Service Line Material	<input type="checkbox"/> Public Service Line Material
3250 W ADAMS ST	NOT LEAD	GALVANIZED REQUIRING REPLACEMENT
3250 W ADAMS ST	NOT LEAD	NOT LEAD

Some addresses duplicates have different values. We can conclude that these are different service lines

Address	<input checked="" type="checkbox"/> Private Service Line Material	<input type="checkbox"/> Public Service Line Material
2301 S LAKE SHORE DR	SUSPECTED LEAD	SUSPECTED LEAD
2301 S LAKE SHORE DR	SUSPECTED LEAD	SUSPECTED LEAD
2301 S LAKE SHORE DR	SUSPECTED LEAD	SUSPECTED LEAD
2301 S LAKE SHORE DR	SUSPECTED LEAD	SUSPECTED LEAD
2301 S LAKE SHORE DR	SUSPECTED LEAD	SUSPECTED LEAD
2301 S LAKE SHORE DR	SUSPECTED LEAD	SUSPECTED LEAD
2301 S LAKE SHORE DR	LEAD	SUSPECTED LEAD
2301 S LAKE SHORE DR	NOT LEAD	NOT LEAD
2301 S LAKE SHORE DR	NOT LEAD	NOT LEAD
2301 S LAKE SHORE DR	NOT LEAD	NOT LEAD

Data Exploration- Assessor Duplicates

Duplicates on address due to multiple apartment numbers.

pin	address	property	property	property	mailing_address
1.32E+13	6040 W EASTWOOD AVE	301	CHICAGO	60630-317	6040 W EASTWOOD AVE
1.32E+13	6040 W EASTWOOD AVE	202	CHICAGO	60630-317	6040 W EASTWOOD AV#202
1.32E+13	6040 W EASTWOOD AVE	303	CHICAGO	60630-317	6040 W EASTWOOD #303
1.32E+13	6040 W EASTWOOD AVE	101	CHICAGO	60630-317	6040 W EASTWOOD AV
1.32E+13	6040 W EASTWOOD AVE	302	CHICAGO	60630-317	6040 W EASTWOOD AVE302
1.32E+13	6040 W EASTWOOD AVE	203	CHICAGO	60630-317	6040 W EASTWOOD AVE203
1.32E+13	6040 W EASTWOOD AVE	201	CHICAGO	60630-317	6040 W EASTWOOD AVE

Some addresses have different latitude and longitudes for same address.

Data Exploration- Expanding Addresses

Some service line addresses are a range of addresses

There are 30,492 expandable addresses. Of those 50 are ending in 00. Of those 4 start with a number.

After partial expanding we get 573,762 addresses. An increase of 86,415 addresses.

This is where it gets kind of fuzzy on how to maintain service line data. We can expand for merges but the unique number of service lines does not increase

Address	<input type="checkbox"/> Private Service Line Material	Public Service Line Material <input type="checkbox"/>

8343 S HEF address		CHICAGO	60620-463	41.741764	-87.6665	Lake	FOSTER P	HIRSCH H	NOT LEAD	SUSPECTED LEAD	

When finding matches we have 453,381 matched on address and 5,389 matches on mailing address. We have a total of 114,992 addresses with no direct match.

This is compared to 417,089 matched on address and 4044 matched on mailing address before expanding. Here we have a total of 66,214 addresses without a match.

Merge on Geocode

Using a cKDTree and based off of euclidean distance used the geocoded data from census to connect assessor addresses to service line addresses.

Unique ID	Address	Match_Sta	Match_Typ	Matched_f	Geodata	Lion_Code	Lion	Private Ser	Public Ser	Lat	Long	Connectec	Num_Connected_Addresses

Current Challenges and Solutions

Missing Assessor Data:

- Some addresses do not match between the Assessor dataset and Service Line dataset.
- Assessor dataset does not include all addresses
- **Solution:** Possibly geocode

Different Latitude/Longitude Coordinates for the Same Address:

- When geocoding the addresses we are getting some different longitude and latitudes
- **Solution:** Look at a reputable website like google and cross reference to find the more accurate source

Incomplete Geospatial Data:

- Some properties lack service line records.
 - **Solution:** Add missing data using neighboring properties.
- 

Future Work

- Once all of our data is compiled and matched, implementing an interactive visualization into the website may lead to some challenges.
- How can we further the website's ease of interaction and navigation, as well as displaying an *impactful* message about the importance of understanding your risk of lead exposure.
- Broadcasting the website and making it accessible to the public.

Thank You!
